

# 10220 CS410001 – Computer Architecture 2014

## Appendix C-1 - Output Samples for Project 1

Please strictly follow the following format to generate your outputs, **or your results may be evaluated as incorrect!**

### Format:

cycle (cycle index in decimal representation)

\$00: 0x(content in hexadecimal digits) # note that there is a space between “:” and “0x”

\$01: 0x(content in hexadecimal digits)

...

... (other registers’ contents)

...

\$31: 0x(content in hexadecimal digits)

PC: 0x(content in hexadecimal digits)

(2 space lines here)

Note that comments are here for your understanding; they should not appear in your output files. If you have any doubts or questions, please check with TA’s.

With the format, let’s walk through an output example. Be noted that you should dump out the contents of registers **before** executing the instruction at each checkpoint.

The following is the content of snapshot.rpt after executing the sample inputs in *Appendix B*. To save space, we show the outputs in three columns; nevertheless, you should generate a one-column report as specified in the “*Format*” section.

### snapshot.rpt:

|                  |                  |                  |
|------------------|------------------|------------------|
| cycle 0          | \$12: 0x00000000 | \$25: 0x00000000 |
| \$00: 0x00000000 | \$13: 0x00000000 | \$26: 0x00000000 |
| \$01: 0x00000000 | \$14: 0x00000000 | \$27: 0x00000000 |
| \$02: 0x00000000 | \$15: 0x00000000 | \$28: 0x00000000 |
| \$03: 0x00000000 | \$16: 0x00000000 | \$29: 0x00000400 |
| \$04: 0x00000000 | \$17: 0x00000000 | \$30: 0x00000000 |
